# Own Portal Integration

One Environment across Business

Simple and easy integration of own Unified Grafical Portal environment into provisioning, billing, monitoring as well as any services using Mobilware Convergent API that offer direct integration into almost all major satellite systems.

Unity have been developed with the aim at offering a single and uniform way of handling provisioning, billing and general service adaption across any type of satellite network.

Operator can simply integrate their portal environment into our uniform satellite API that offer direct access across basically any avaliable satellite provisioning and billing interface, making creation of new products very simple and yet allow the operator to handle any type of product offering.

Unity manage all the technical functionality needed in work flow adaptions as well as associated logic rules - allowing very advanced provisioning, convergent billing, reporting, invoicing and service adaption in a way not seen before.

Operator Frontend Environment
An operator can directly adapt any functionality from Unity into their own portal environment for internal as well as external use - meaning all functionality can be enabled for self service where needed.

Unity will through well defined product templates allow the operator to offer basically any type of satellite service in a simple and yet powerfull way.

Billing across connected satellite networks as well as own added billing entities like example subscription fees and similar are all managed across any type of product offering.

Operator Dashboard
Adaption of new products, management of billing data as well as any advanced configuration are all handled through a dedicated a secure operator dashboard that is used to manage Unity functionality.

This environment are directly integrated into the major satellite providers sale catalogues allowing easy and simple management of new products and associated underlaying data.

All are implemented using intuitive drag & drop interfaces, adaptive content based menu structures that simplify the day to day operation.

Satellite Integration made Simple
Unity are today integrated directly with a long range of satellite solutions across provisioning API's as well as basically any format of billing CDR data from satellite owners as well as their larger partners. Inside Unity are a swift range of functionalities that allow the operator to basically sell any service without programming.

Unity offer example a complete transparent as well as decoupled user structure that allow the operator to build any hierarki when it come to billing and invoicing.

A complete and highly advanced billing and finance system is integrated, fee generation, leasing, increments, min periods, recurring charges, complex wholesale processing, rolling allowance, group in groups, multi level rating across cost, partners, groups, companies, subscribers - all at the same time. Unity are delivered with a swift range of integrated modules for Financial integration into SAP API, Navision API, SAP Crystal reports, POP manager for POP management, Analytics, Revenue Assurance, Security scanners, Remote Terminal Management, Support environment, IPAM module, Prepaid + Voucher module, B2B portal module and more.

Integrated Environments
Unity have over the last 18 years been integrated into a swift range of satellite networks as well as other service interfaces used in this busines - here to be listing some samples:

Inmarsat I4 - BGAN, SBB, FBB, GSPS, LINK, ISATHUB...
Inmarsat I5 - GX/FX/JX - Enterprise, Government, Maritime..
Iridium PTT - Postpaid, Prepaid, Openport, SBD, GDB, Certius
Thuraya - Postpaid, Prepaid, Thuraya IP, Thuraya M2M..
Eutelsat - KU Band, Maritime, Aero, Corporate..
Orbcomm - M2M, Tracking, IoT
Viasat - KVH - Maritime services - Aero ongoing
VoIP Systems - SipXcomm, 3CX, Asterisk..
3G/4G - Vodafone and Orange are fully integrated

Above mainly list provisioning integrations - on billing integration are more than 50 operator formats implimented across Satcom Global, Marlink, MVS, KDDI, Singtel, AST...

Mobilware do also offer complete POP Environment - some of the markets largest and most advanced satellite POP environments in Amsterdam and New York are provided by Mobilware - example for Airbus Defense, Navarino, Network Innovation, GMPCS, Speedcast, Cobham...

Unity do offer full integration across radius servers, firewalls, WAN acceleration from Riverbed, Silverhead, web accelerators, same level of self care as provided across Unity interfaces.

Mobilware

**We're a global strategic satellite firm.
We design product-service experiences, making business transformation happen.**
