

# Unified Satellite Provisioning

## Unified Satellite Provisioning

**Mobilware Unity provisioning is not a system it is a concept that delivers a 360 degree experience for the operators as well as partners and end users.**

We deliver the absolute most advanced and future proof satellite provisioning solution on the market today, a single platform that delivers real-time access to any services in the satellite business in a way not seen before.

Manage all provisioning across partners, customers, packages and products. Direct real-time handling into Inmarsat I4 services, Iridium services, Thuraya services, Globalstar services, KVH services, Intelsat services, VSAT services, ones own developed services as well as the new Inmarsat GX services.

A platform that delivers highly secure and yet easy to use interfaces for the operators daily work. In the form of intuitive work flow that has integrated help and error handling making it easy and flexible to use.

A long history of leadership and innovation went into our new Unity solution. For over 10 years, Mobilware provisioning solutions have been used by most of the biggest satellite operators on the market like SingTel, KDDI, AST, GMPCS, Thales, Aces, Telespazio, Arinc, Globecom, Network Innovation, Boeing, Station711...

Package ID	Type	Friendly Name	SIM Card Number	MSISDN - Mobile Number

## User Management

Manage all users across partners, companies, subscribers, sites, vessels and aircraft through the same interface. Our advanced data entry tools are smart and elegant; enter call sign and allow the system to auto fill needed fields automatically, quick search across any data type in real time, intelligent roll back in case of failing provisioning flow.

## Satellite Services

Manage postpaid, geo dependent, group packages, offer prepaid services even on non prepaid products. Handle wholesale traffic and repackage it as prepaid, group package that include bundles in the form of money, usage across data, messaging, voice, basically any form for satellite service is managed in an easy manner.

## Customer Self Care

Any level of customers across partners, companies, subscribers have real-time access to traffic and provisioning data that allow them to monitor and manage data directly..

## Advanced Administration

Customers are getting used to handle their Telecom services directly, Mobilware Unity provides the markets most flexible and at the same time military grade secure Self care environment that allows any customer level to manage their own terminals and settings in an elegant and intuitive way not seen anywhere else in this industry.

## Direct Integration

Mobilware Unity offers direct integration with basically any related platforms, across:

- > Operators own POP
- > Financial system for user management
- > End user Firewall profiles
- > Radius servers for IP address assignments
- > Intelligent bandwidth Throttling.
- > SAP Crystal Report servers

And all delivered functionality is fully enabled in out provisioning web service API that allows the operator or any of the operators partners, to interact in real-time with the provided features.

## API for complete satellite business

We provide a single web service API (REST JSON based) that allows direct real-time interaction with any satellite operator interface. Meaning a single interface across Inmarsat I4 services, Inmarsat GX, Iridium SOAP API, Thuraya SOAP API and similar.

Our API is not limited to normal provisioning it also offers service access as well as direct access to support ticketing systems for easy and full integration.

## Technical info

Mobilware Unity comes with a lot of integrated service functionalities like a complete Prepaid platform, complete Voucher management system, Web acceleration for satellite traffic, Remote terminal management, Access manager handling radius access.
